

Corporate philosophy

Identifying technology trends in industrial communications at an early stage, implementing them at the right time and offering our customers innovative technologies, products and services at a high level of quality and at fair prices is the foundation of our business. To this end, we develop and produce everything in-house along the value chain, from network controllers to devices and the associated software, ensuring a high level of competence and the best support.

We maintain open and honest communication in our organization and with our customers. We're committed to quality, see tasks as personal challenges and are not satisfied with mediocrity. It is our mission to give our employees the opportunity to be proud of their achievements and to value long-term customer relationships based on mutual respect and trust.

We pursue a sustainable business policy that secures our autonomy as an independent family business.

We're committed

- ... to fulfilling all applicable requirements and obligations pertaining to quality standards, environmental protection and information security guidelines.
- ... to continuously improving our integrated management system, from the development stage to the finished product and services.
- ... to protecting the environment, preventing environmental pollution, conserving resources and thus contributing to the continuous improvement of environmentally relevant services.
- ... to delivering customer satisfaction as an essential aspect of our quality-driven business practices.
- ... to maintaining appropriate information security measures to protect against hazards or threats, prevent economic damage, and minimize risks.

Our employees act in accordance with the integrated management system for the sustainable implementation of the above-mentioned measures. This is accomplished and evaluated on the basis of concrete objectives, the implementation of action plans, and through regular audits.

We've been certified according to ISO 9001 since 2000. As part of the successful certification according to ISO 14001 in 2011, the quality and environmental management were merged into an integrated management system (IMS).
